---

Provides an improvement in skin condition, as well as muscle tone.

---

Lifts, tightens and tones the contours of the face and neck.

---

LIFT | TIGHTEN | TONE

CARLTON

## Meso Lift Pro explained

Microcurrent allows for the repositioning of facial muscles and the improvement of facial contours.

Electroporation, a non-invasive form of mesotherapy, facilitates the penetration of concentrates and products into the skin.

The Microcurrent application of this machine uses only one double headed probe in an upward stroking and holding movement, as opposed to the traditional two probe application. This simplifies the application whilst giving an excellent result, reprogramming the muscle fibres as the electrical impulses produced by the equipment are compatible to the natural bio-electrical impulses produced by the body. This method has been successfully used for many years in the medical world to treat bell's palsy, stroke victims and sports injuries.

Electroporation is a fairly recent edition to the beauty world, having been used in the medical profession for the transdermal introduction of drugs into the system, stem cell and genetic research. It allows for the introduction of product into the skin to great depth. The nature of the currents used in this treatment make the skin extremely receptive to concentrates.

## Your Results

---

Reduction in, and prevention of signs of visible ageing

---

Offers a comfortable and relaxing treatment

---

Lines and wrinkles can be relaxed, smoothed and plumped

---

Provides an improvement in skin condition, as well as muscle tone

---

Lifts, tightens and tones the contours of the face and neck

---

Increases skin's elasticity

---

Aids lymphatic drainage which can reduce puffiness

---

## FAQs

### **Is it new?**

Microcurrent has been successfully used in the beauty industry for over 20 years. Electroporation is a relatively new introduction but has been used in the medical profession for a number of years. It has been adapted for use in beauty treatments, allowing the absorption of products to hydrate and plump out the skin.

---

### **Is it painful?**

There is a slight sensation from both of the currents used in this treatment, however, it is a slight tingling, and some clients may experience a pulsing sensation in the muscles on application of the Microcurrent – both are comfortable.

---

### **Is it suitable for me?**

Meso Lift Pro is suitable for most people of all ages, male or female. It is used as a preventative as well as corrective treatment.

---

### **Is it suitable for my skin type?**

Your therapist will go through a detailed consultation with you to ascertain your suitability for the treatment. Meso Lift Pro is suitable for all skin types – even sensitive skin.

---

### **When will I see results?**

You will start to see results after your first Meso Lift Pro treatment. The skin will appear firmer and toned, however, to enhance and maintain the results, a course of 8 to 10 treatments is recommended with an average of two facials a week, with a monthly maintenance programme.
